PIPELINE REPLACEMENT AND REHABILITATION PROJECTS

Each year the District schedules pipeline replacement and rehabilitation projects throughout the sanitary sewer collection system. Projects are selected based on pipeline condition information obtained from video inspections, field maintenance reports, economic analysis and on the financial resources of the District.

The projects selected for reconstruction each year are those line segments in very poor condition and at the end of their useful life based on the above investigations. The [Project Location Map](#) identifies the location and extent of the lines to be worked on. Check the map for any construction projects in your neighborhood. Our staff will be happy to provide you with project construction details and proposed scheduling.
